

1 How memory is managed in python
A Python uses the dynamic memory allocation which is managed by heap data structure. Memory heap holds the object and other data structure. memory heap holds the object and other data structure that will be used in the program. Python memory manager the allocation or de-allocation of the heap memory space through API function.

2 What is purpose of continue statement in python?

A The continue statement is used to skip the remaining code inside a loop for the current iteration only.
